SUMMARY

Software Engineer with 5 years of experience building scalable SaaS applications and performance-critical frontend systems using Angular. Strong understanding of backend systems including API design, database schema modeling, and query optimization, with a focus on designing scalable application architecture. Worked on SaaS platforms involving real-world business workflows and large-scale data handling.

EXPERIENCE

Software Engineer – Tango Eye

April 2025 – Present

1. Architected and developed a canvas-based store layout system from scratch using Angular and Fabric.js, enabling drag-and-drop configuration of fixtures and product placements.
2. Developed frontend architecture for complex UI interactions including zoom, pan, state synchronization, and layout persistence for large-scale configurations across thousands of retail locations.
3. Designed and implemented backend APIs for planogram management, including data modeling, schema design, and integration with existing services.
4. Improved frontend performance by introducing OnPush change detection, lazy loading, signals, standalone components and modular architecture, reducing bundle size and improving rendering efficiency.
5. Integrated near real-time store data from external systems to visualize product compliance, placement status, and operational insights.

Software Engineer / Team Lead – Tandemloop Technologies

August 2021 – March 2025

Team Lead (Aug 2023 – Mar 2025)

1. Led a team of 7 engineers to redesign and rebuild a SaaS platform from scratch, improving scalability and enabling faster feature delivery.
2. Drove architectural decisions across frontend and backend, including migration from REST to GraphQL and implementation of multi-tenant architecture.
3. Established coding standards, project structure, and development workflows, and conducted regular code reviews to ensure maintainability and quality.
4. Managed end-to-end delivery by coordinating with design, QA, and DevOps teams, handling sprint planning, task allocation, and feature releases.

Software Engineer (Aug 2021 – Jul 2023)

1. Revamped a legacy Angular application by rewriting the codebase from Angular 11 to Angular 17 using modern architecture patterns and standalone components.
2. Developed core modules including authentication, organization management, role-based access control, and order fulfilment workflows.
3. Improved application performance and scalability by restructuring frontend architecture, optimizing data flow, and reducing bundle size.
4. Built reusable UI components and standardized data handling patterns to support rapid feature development across multiple SaaS modules.

SKILLS

Frontend: Angular, TypeScript, JavaScript, Fabric.js, Flutter

Backend & Tools: Node.js, MongoDB, GraphQL, REST APIs, AWS (S3), Firebase, Docker, Git

Familiar: SQL, Unit Testing, Agile

EDUCATION

MCA – University of Madras, 2024

B.Sc Physics & Computer Science – SASTRA University, 2021
